# Monika Hossain

C# & .NET Core Financial Portal Developer | LankaBangla Securities Limited | ASP.NET Core MVC | SQL Server | Financial Reporting Automation | Python | ML & Software Engineering Researcher  
Dhaka, Bangladesh

## Summary

I am a C#/.NET backend developer with over three years of experience in financial platforms, web applications, and reporting automation using ASP.NET Core MVC and SQL Server. One of my key projects is a Daily News Recap and Financial Reporting Portal. I developed a centralized workflow that retrieves financial news and market data from SQL Server, supports content review, generates structured market summaries, and produces professional multi-page PDF reports. The platform integrates index performance, market activity, turnover, valuation, exchange rates, commodities, corporate events, and IPO information. Alongside my professional work, I am pursuing an M.Sc. in Computer Science with a Software Engineering focus at AIUB. I am also an active researcher working at the intersection of software engineering, machine learning, and artificial intelligence. My broader research explores explainable AI, NLP-based requirements analysis, software-documentation quality, and machine-learning applications in software engineering. Through my research, I have gained practical experience with Python, data preprocessing, TF-IDF, CatBoost, TabNet, SHAP, classical machine-learning models, cross-validation, performance evaluation, academic writing, and conference presentation.

---

## Experience

LankaBangla Securities Limited

Officer

August 2023 - Present (3 years 2 months)

Bangladesh

- Developed and maintained an ASP.NET Core MVC-based Daily News Recap Portal that automatically retrieves financial news and market data from SQL Server, allows users to select and review news content, generates structured market summaries, and produces professionally formatted multi-page PDF reports using Microsoft Playwright.

- Integrated index performance, market activities, turnover, valuation, exchange rates, commodity prices, corporate events, and IPO information into a centralized daily research report.
- Provided backend support for the Lankabd.com financial portal, including feature implementation, database operations, financial data management, system updates, and data integration.
